Remind
www.remind.com; iOS & Android Apps

Mass text messaging site designed for teachers. Students enroll in class sections, via text message. No phone numbers are exchanged. You can send messages to the entire class, smaller groups, or individuals. You can set it so they can message you back or not. You can schedule announcements to be sent later, send attachments (pictures and other files), add multiple teachers to one class section, read receipts, you can also organize activities (field trips, fundraisers).

Google Drive
drive.google.com; iOS & Android Apps
Cloud-based office suite (word processing, spreadsheets, slide presentation) and file vault. Easily share files with others. Others can collaborate on the same document at the same time! There is a Google Drive app, and apps for each office product (Docs, Sheets, etc.)

Google Voice
voice.google.com; iOS & Android Apps
Free phone number service. You have to have an existing phone number to work, but it is a second number. People call/text your Google Number, and it will be sent to your existing phone (mobile or landline). You can set it to ring multiple phones at a time, or different phones throughout the day. You can set up "Do Not Disturb" hours where calls go straight to voicemail.

Google Classroom
classroom.google.com; iOS & Android Apps
Basic command center for online work. You are able to assign work, students can turn in it with attachments of files. You can grade and give feedback through Classroom. With some advanced work, you can export grades from Classroom to existing Gradebook software (i.e. PowerSchool/ PowerTeacher)

Instagram
iOS & Android Apps
Social media site around pictures. I use it to promote my band's work. Uploading pictures and videos (1 minute length max.)of show performances as well as when we are on trips or during practices. Basically, it's a PR set up for your program. I also use it to communicate to the students via posts, (example: fundraiser reminders, trip itineraries, field show announcements).

Facebook
www.facebook.com; iOS & Android Apps
I'm going to guess you at least have an understanding of what Facebook is. Here's the breakdown on how I use it: I don't friend students, ever. EVER. I have some former students (who graduated and are over 18), but it's not every student. And then, I have my privacy settings so locked down, they can't see anything I wouldn't want spread to my current students. **Groups** are a great way to relay information to students. Most of them have a Facebook already. They join the group, and you can post all sorts of information to them. You have the option of Public (anyone can see posts) or Private (only members can see posts). Do whichever meets your needs. Personally, I don't care if everyone knows what field show I'm doing, but I know some people like to keep that to themselves. I always let parents join. The transparency is just easier.

Twitter
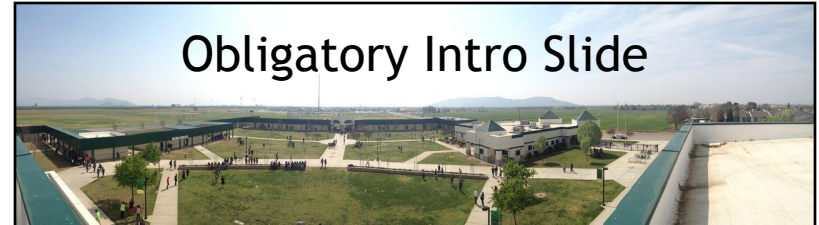

www.twitter.com; iOS & Android Apps

Again, I'm going to assume you've heard of Twitter. Here's some uses: **For you.** Create an account to connect with others. I use Twitter and a giant Personal Learning Network (PLN) for band, teaching, and life in general. If I have a question, someone out there may have an answer. **For your program** Share content. It's PR buzz. The more people who know about you, the better. You can send out pics and videos, and you can link your Instagram account to make it easier. Send our reminders of events, deadlines, and Concert Announcements. Use an account to connect with students (Publicly. Don't private message students). Share interesting things (educational or not); send links to YouTube videos of awesome performers/performances; share achievements, class-related or not; show your students you're human. They like knowing that you watch Stranger Things or Forensics Files or Harry Potter.

Calendar   Drive   [Google]+   Hangouts   Photos   Sites

Slide 2:
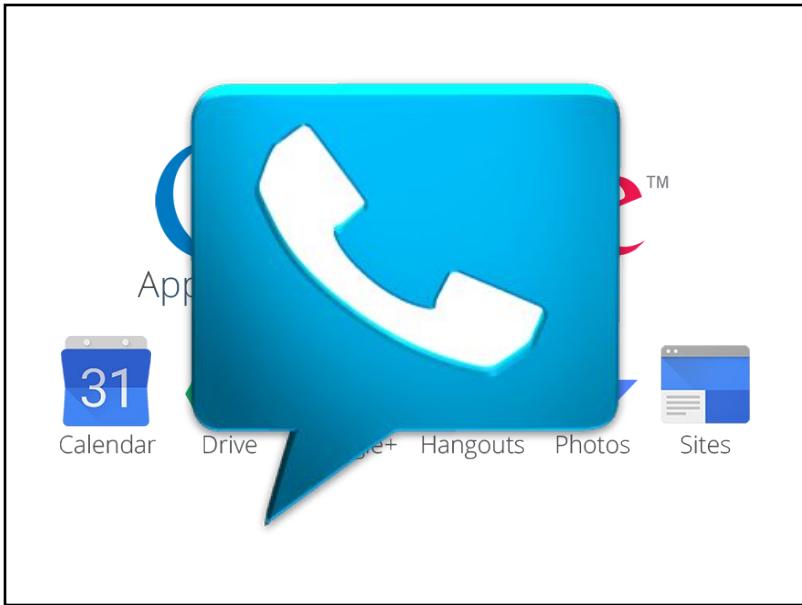

Google™ Voice

You can turn it off whenever you want

You can schedule it to turn on/off

Send/Receive text messages

Not your number

NO PICTURE MESSAGES

Listen to messages while they're being left

Transcript of voice messages sent via email/text/push

Separate voice mail box

Can set up unique greetings for each caller

Block callers & texters

Ring whichever & however many phones you want (mobile or landline) All-at-once, depending on who's calling or time of day

Ability to record incoming calls

Slide 3:

Google™ Voice

GOOGLE SAVES EVERYTHING

Ability to record incoming calls

(mobile or landline) All-at-once, depending on who's calling or time of day

Slide 4:

Google™ Voice

How I've Used It:
- Students contact me for info, questions, or to report an absence.
- Students call and leave messages of individual practice assignments.
- People can contact me without hoping to catch me at a certain site and without me giving out my personal number.
- My classroom phone rings only when it's another school phone calling!

How I've Seen It Used:
- Homework Hotline
- Personal number in a given area code
- One number reach-all
- Free texting online from anywhere with Internet

Groups

Create Student-Friendly Facebook Groups for your classes.

- Students aren't added as friends
- Set the group to "Public" so everyone can see what goes on
- Set group to "Private" if you like to keep your performance information top secret
- Allow parents to join
- Discussion wall and forum for your class
- Video and Photo *public* exchange
 (You can even tag group members in the photos, so they will be sure to see them).
